

Policy challenges in Germany and Poland: “SHARE: 50+ in Europe”

Michał Myck

Demographic background: Population pyramids: 2010, 2020, 2050 (male/female)

Poland:

Germany:

Outline:

- Labour market challenges. Extending working lives:
 - system requirements;
 - interplay between demand and supply of older workers (“making work pay”, employment quality, skills and productivity).
- Healthcare system challenges. Healthcare costs:
 - healthcare quality and effectiveness of treatment;
 - life style and healthcare costs;
 - long-term care.
- Health and the labour market:
 - healthy people work longer and earn more (feedback effects, e.g.: *Haan & Myck, JHE, 2009*).
- Health and labour market outcomes crucial from the point of view of the success of retirement system reforms and sustainability of public finances.

Background for policy challenges:

The west-east gradient

- Labour market challenges:
 - employment rates, quality of work, work assessment;
 - early retirement as escape route from labour market.
- Healthcare system challenges:
 - health significantly worse in Poland;
 - signs of poor quality of healthcare;
 - mental healthcare in Poland.
- SHARE: 50+ in Europe: first two waves of data collection in Poland:
 - 2006/07 (baseline), 2008/09 (SHARE-Life);
 - values controlling for differences in age and gender structure;
 - More information: www.share-project.org and www.cenea.org.pl

Work and retirement, 50-64:

Employment and retirement rates

Employed/Self-employed

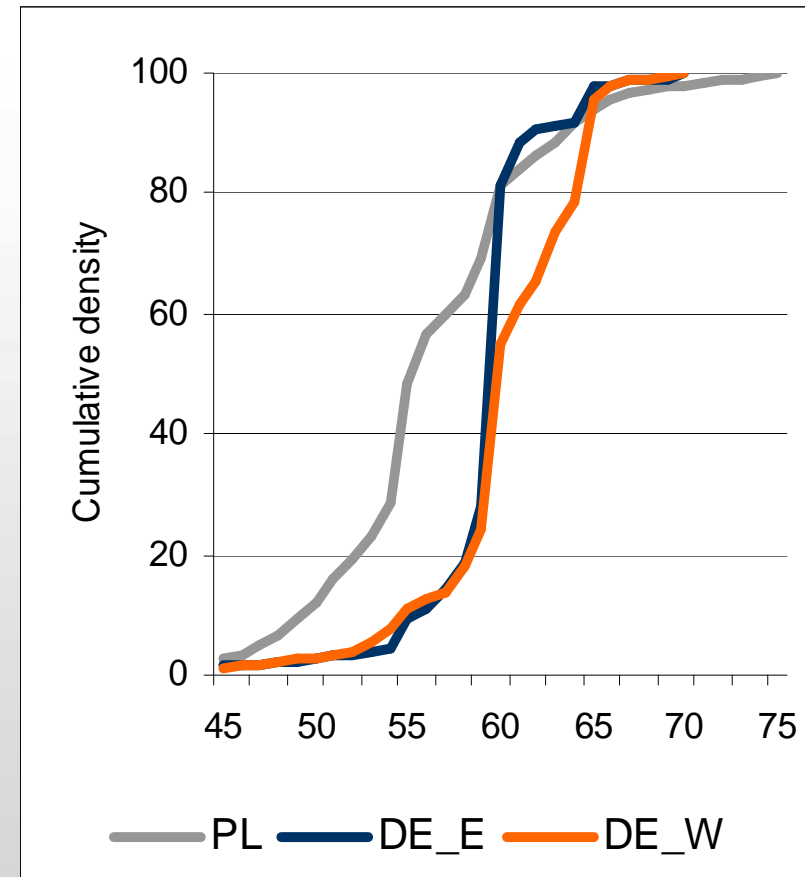

Retired

Retirement age of current retirees:

Men

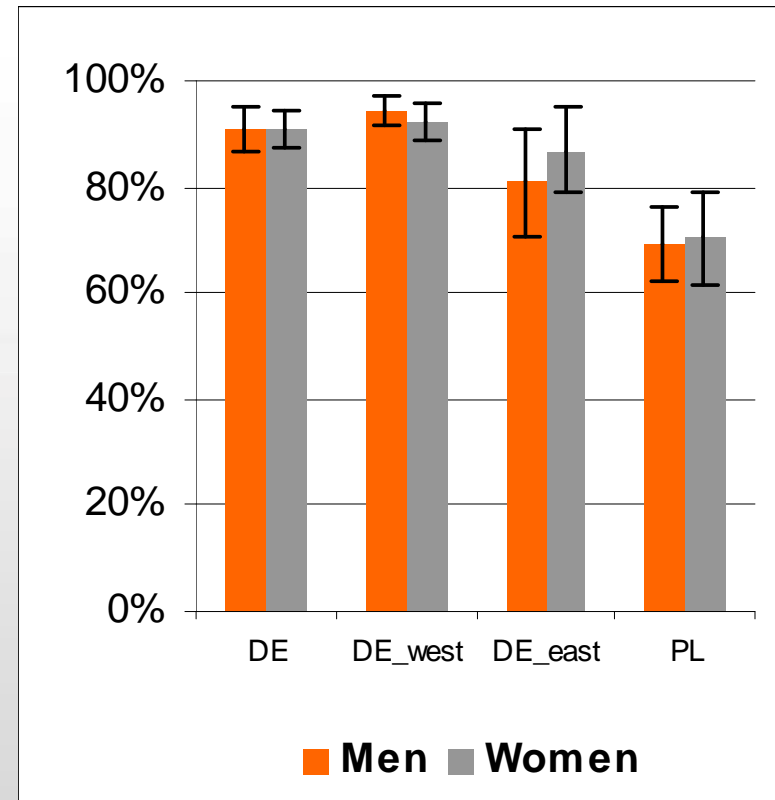

Women

Source: Calculations using SHARE wave I and II data.

Work and retirement, 50-64: Is work attractive?

Wants to retire as early as possible

Employees with permanent contract

Source: Calculations using SHARE wave I and II data.

Work and retirement, 50-64: Is work attractive?

Salary/pay is adequate

Opportunity to develop new skills

Source: Calculations using SHARE wave I and II data.

Work and retirement, 50-64: Work and assessment of financial situation

Find it easy or fairly easy to make ends meet

Source: Calculations using SHARE wave I and II data.

Health of the 50+:

- subjective health assessment:

**Self-assessed health status:
Proportion in very good or excellent health**

Source: Calculations using SHARE wave I and II data.

Health of the 50+:

Symptoms of poor health and limitations in ADL

3+ symptoms of poor health

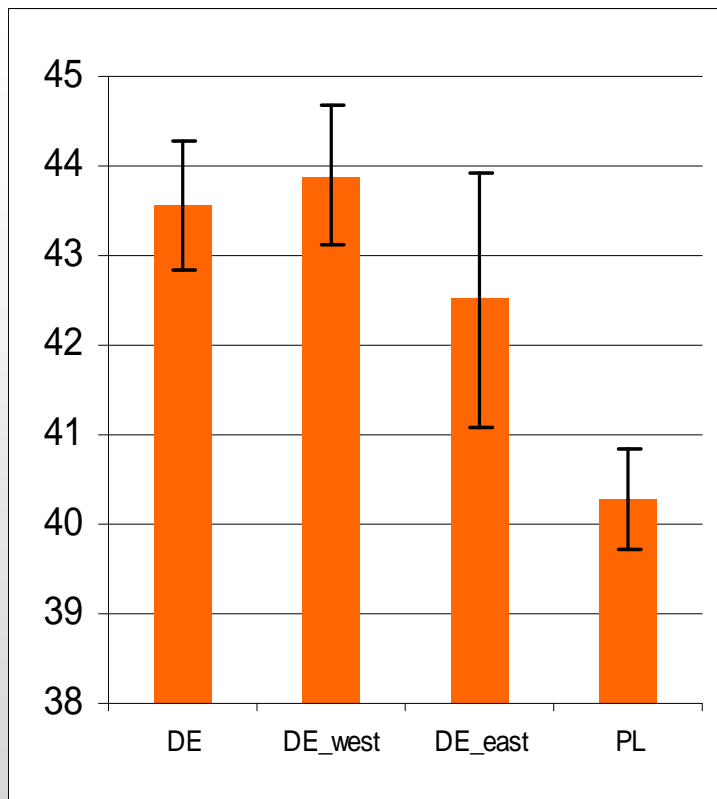

3+ limitations in ADL

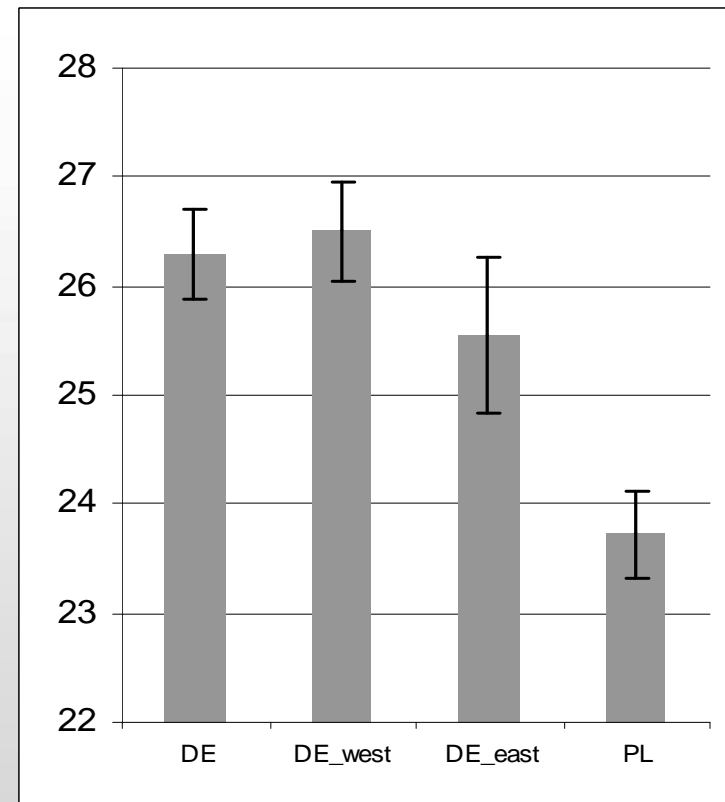

Source: Calculations using SHARE wave I and II data.

Health of the 50+:

- objective health measures: grip strength (adjusted for height and weight)

Grip strength (kg): men

Grip strength (kg): women

Source: Calculations using SHARE wave I and II data.

Health of the 50+:

- objective health measures: heart attack

Source: Calculations using SHARE wave I and II data.

Health of the 50+:

Health and healthcare – the role of diagnosis and treatment.

Diabetes

High blood pressure

Labour market and health outcomes: summary

- The west-east gradient in labour market and health outcomes:
 - labour market activity, job satisfaction, job stability;
 - financial situation;
 - subjective and objective health measures.
- Signs of worse healthcare quality/awareness in Poland:
 - illness identification;
 - life-style of the 50+.
- How important is health for labour market outcomes?

Work and retirement, 50-64: What correlates with employment?

Health and employment: underused capacity

Labour market status among 50-64 *without any functional limitations*

Health matters but differences in health do not tell the whole story as far as the labour market is concerned.

Source: Calculations using SHARE wave I and II data.

Conclusions:

- Key policy challenges:
 - Labour market – extending working lives:
improvements in employability of 50+ (skills/productivity, age discrimination); job quality, job security, financial incentives, reducing labour market constraints (labour demand factors and health).
 - Health – improvements in welfare and reduction in future costs:
improvements in healthcare (diagnosis and prevention), increased health/life-style awareness.
- Potential effect of pension system reforms:
 - financial incentives on the labour market;
 - health as individual investment in productivity (*Grossman, 1972*).
- Therefore: many parallel challenges which can contribute to the success of the pension system reforms in the long run.

Conclusions and background for panel discussion:

Pension reforms in Poland and Germany

– achievements, failures and the future.

- PART 1: Specific issues on pension reforms. Brief assessment of:
 - specific steps of reform implementation;
 - financial sustainability vs. adequacy of future retirement incomes;
 - major risks for the medium term success of the reforms.

- PART 2: General points for discussion:
 - what labour market reforms should accompany the retirement system changes;
 - can improvements in health and healthcare in DE and PL contribute to better labour market outcomes and thus stability of retirement systems?
 - should health policy be higher on the agenda of economists?
